

## **ENVIRONMENTAL IMPLICATIONS SECTION**

### **BACKGROUND INFORMATION**

#### **1.0 What is meant by Environmental Implications?**

In May 2019, NHDC declared a Climate Emergency. As part of that motion it was agreed that ***'officers would ensure that, as the Council's policies are routinely reviewed, specific consideration is given to how policies and our related decisions and actions, affect our contribution to climate change, and where necessary, update these policies to reduce our impact wherever possible.'***

This guidance provides a means to undertake this specific consideration when reviewing policies and any related decisions and actions.

The revised report template will carry this additional section for completion by officers:

#### ***"ENVIRONMENTAL IMPLICATIONS***

***Use one of the following paragraphs only***

***14.1. There are no known Environmental impacts or requirements that apply to [the actions/ Policy/this report].***

***14.2. Environmental Impact Assessment has been undertaken. [The actions / Policy /this report] have been considered and [there are/ are no relevant adaptations/ mitigation measure that could be applied] [the following adaptations/ mitigations have been included – as detailed in X]."***

If the report has identified environmental impact, then this guidance assists the author to articulate them in a uniform manner.

#### **2.0 Identifying who is responsible for the Environmental Implications Assessment**

The person identified to undertake the Environmental Implications Assessment should be the person with whom responsibility for evidencing need to change a policy or service decision rests.

It is advisable that assessment should only be taken by council officers in their relevant policy/service areas. This will ensure that proper ownership of the analysis is maintained, that there is sufficient knowledge of the service itself, and any results of the analysis inform future service development and improvement.

#### **3.0 Conducting an Environmental Implications Analysis and Assessment**

The assessment and its principles apply to existing as well as new and proposed policies. In order to be most effective, any Environmental Implications Assessment should begin with analysis during policy development or at the early stages of a policy review, considering its possible effects well in advance of implementation. The assessment form includes example questions to help guide your consideration of the environmental impact of the policy.

### 3.1 Undertaking analysis: what environmental information can I use?

The analysis you undertake will inform your assessment. It is important that information about the projected impact of the policy is appropriate, factual and reliable.

If you do not have environmental information about a particular policy, consider whether you need to fill these information gaps by surveys or other engagement or stakeholder meetings. This may include, in the longer term, questions included in the District Wide or Citizens Panel surveys, for example, or the making use of community events to test agreement with a policy decision that clearly impacts our contribution to climate change. You might also consider engaging with environmental organisations.

### 3.2 The findings

Having reviewed your analysis and assessment, there are four main steps that you can take with regard to any proposal you are making:

**No major change** – The analysis demonstrates that the policy is robust, and the evidence shows no potential of adverse impacts.

**Adjust the policy** – This involves taking steps to remove barriers or to better promote a reduction in the impact on the environment. It can mean introducing measures to mitigate the potential effect.

**Continue the policy** – This means adopting your proposals, despite any adverse effect or missed opportunities to reduce the impact on the environment.

**Stop and remove the policy** – If there are adverse effects that are not justified and cannot be mitigated, you will want to consider stopping the policy altogether.

### 4.0 Monitoring and review

**Assessment is an ongoing process that does not end once a policy has been agreed or implemented.** Service provision, demographics, and the physical environment may change, or new options to reduce an adverse effect could become apparent. This does not mean repeating the analysis, but using the experience gained through implementation to check the findings and to make any necessary adjustments.

Consider:

- How you will measure the effects of the policy
- When the policy will be reviewed and what could trigger an early revision
- Who will be responsible for monitoring and review
- What type of information is needed for monitoring and how often it will be analysed
- How to engage stakeholders in implementation, monitoring and review

### 5.0 Publication

It is recommended that the Council should publish information on environmental analysis alongside the policy or decision that it refers to. Arrangements have been made to ensure that reference to environmental analysis appears in all formal committee reports on the corporate template.

## Environmental Implications assessment

1. Name of activity:	<i>Offley Allotment Association wish to be connected to the mains water supply</i>				
2. Main purpose of activity:	<i>To benefit the current allotment holders and encourage more people to make use of them.</i>				
3. List the information, data or evidence used in this assessment:	<i>Qualitative information from Offley Allotments, analysed by the Policy &amp; Community Engagement Team.</i>				
<b>Area of Potential Impact</b>	<b>Examples to Consider (non-exhaustive)</b>	<b>Neutral (X)</b>	<b>Negative (X)</b>	<b>Positive (X)</b>	Describe the contribution/impact on the area that the decision may have - assess whether this impact is a negative or positive or neutral one.  <b>Negative: What are the risks?</b>  <b>Positive: What are the benefits?</b>
1. Impact on greenhouse emission and support adaption to the effects of climate change	<p>Will energy needs be met through renewable sources?</p> <p>Will it reduce emissions through retrofitting new technology?</p> <p>Will it reduce greenhouse gas emissions by reducing energy consumption and the need to travel?</p>			People growing their own produce has a positive impact on climate change	<p><b>Negative</b></p> <hr/> <p><b>Positive</b></p> <p>POSITIVE</p>
2. Use of natural resources including water and energy	<p>Will it reduce water consumption?</p> <p>Will it reduce energy consumption?</p>			The allotmenters currently collect rainwater as much as they can. However,	<p><b>Negative</b></p> <hr/> <p><b>Positive</b></p>

				<p>this is weather dependant so if it's been dry, they have to bring water from their homes and it's too heavy to carry without a car so most will drive. Rather than necessarily increasing, water usage will be shifted from the allotmenters' homes to on-site, and having water on-site will mean that there are fewer car journeys required to transport water.</p>	<p>POSITIVE</p>
<p>3. Minimisation of flood risks to the area (i.e. promotion of SUD's. protect surface and ground water quality)</p>	<p>Will it minimise flood risk from all sources of flooding?</p>	<p>This will not impact either way on flood risk or ground water quality</p>			<p><b>Negative</b></p>
	<p>Will it reduce property damage due to storm events/ heavy rainfall by improving flood resistance and flood resilience?</p>				<p><b>Positive</b></p>
<p>4. To protect, enhance and create environments that encourage and support biodiversity</p>	<p>Will it protect, enhance and increase biodiversity and protect habitats?</p>			<p>The allotments will improve biodiversity most of the allotments leave a wild area to attract pollinators and the local primary school and playgroup</p>	<p><b>Negative</b></p>
	<p>Will it improve access to and promote educational value of sites of biodiversity interest?</p>				<p><b>Positive</b></p> <p>POSITIVE</p>

				use the site for educational purposes	
<p><b>5. To improve Air Quality</b></p> <p><i>(air quality describes how polluted the air we breathe is)</i></p>	Will it improve air quality?			The more horticulture taking place on the site the more the plants growing there will assist with air quality	<b>Negative</b>
	Will it reduce emissions of key pollutants?				<b>Positive</b> POSITIVE
<p><b>6. To reduce need to travel, the use of private motorised vehicular transport as well as encourage walking, cycling, and use of public transport</b></p>	Will it encourage increased walking, cycling and use of public transport?			By providing suitable allotment site in the village will mean that residents will not have to drive to allotments further afield.	<b>Negative</b>
	Will it increase the proportion of journeys using modes other than a car?				<b>Positive</b> POSITIVE

<p><b>7. To reduce waste production and increase recycling, recovery and reuse of waste</b></p>	Will it lead to reduced consumption of materials and resources?			It could possibly reduce household waste by use of composting.	<b>Negative</b>
	Will it reduce household waste?				<b>Positive</b> POSITIVE
	Will it reduce construction waste?				
	Will it increase recovery recycling and re-use?				
					<b>Negative</b>

<i>8. To enhance the public realm and street improvements</i>	Will it reduce litter?	The impact on this is Neutral			<b>Positive</b>
	Will it enhance the quality of public realm?				
<i>9. To protect, enhance and seek opportunities to increase open space</i>	Will it improve open space?	The impact on this is Neutral			<b>Negative</b>
	Will it improve landscape character?				
	Will it minimise development on Greenfield sites?				<b>Positive</b>
<i>10. To reduce noise and impact of noise</i>	Will it reduce noise pollution from vehicles?	The impact on this is Neutral			<b>Negative</b>
					<b>Positive</b>

<b>6.0 Results</b>			
	<b>Yes</b>	<b>No</b>	
Were positive impacts identified?	Yes	<input type="checkbox"/>	6 positive impacts were identified
Were negative impacts identified (what actions were taken)	<input type="checkbox"/>	None	
<b>7.0 Consultation, decisions and actions</b>			
Describe the decision on this activity (refer to section 3.2)			
No major change: To provide grant funding from Community grants towards the installation of mains water to the site			
List all actions identified to address/mitigate negative impact or promote positive impact			
Action	Responsible person		Completion due date
PR regarding the grant award and the environmental benefits	Claire Morgan		01.11.21
When, how and by whom will these actions be monitored?			
To be monitored by the Community Engagement team (with input from the Corporate Policy Team) through liaison with Offley allotment about their water usage and other environmental impacts one year after funding release (if the application is successful).
